ABSTRACT
March 10, 2005

The Bar Clamp Corner Squaring Fixture hereinafter called "Adaptor" is used in conjunction with a beam clamping assemblies to hold and lock in place a plurality of frame members.

The Adaptor provides a unique method of using existing beam clamping assemblies to clamp frame members and allow them to be glued and held in square while the glue dries.

The Adaptor is designed to be unattached from the bar clamp assembly that provides the clamping function. This facilitates the Adaptor to be used on a plurality of different beam clamping assemblies. The Adaptor can be easily adjusted by simply moving the bar clam jaws to hold both small and large size frames.

The Adaptor is used by itself and requires no additional fixtures to complete the function of maintaining a plurality of frame members in a square position in a bar clamping assembly.
